## Retina Surgery Performed Using 3D “Heads-Up” Screen

**Dr. med. Claus Eckardt**, professor of ophthalmology at **Klinikum Frankfurt Höchst**, Frankfurt, Germany, performed a procedure to remove a sub-retinal fibrovascular tumor close to the macula and optic nerve without using microscope oculars, but instead using a high definition 3D display screen by **TrueVision 3D Surgical**. Dr. Eckardt used the most recent version of the TrueVision digital system integrated with a **Leica** ophthalmic microscope. TrueVision's CEO **Forrest Fleming** said, "We are very appreciative of Dr. Eckardt's collaboration as we advance the field of computer-guided surgery. It starts with digital image quality being equal to or better than the optical microscope." More information can be found at <http://www.truevisionsys.com/announcement52.html>.
